

SATQUERY AI — GEOSPATIAL INTELLIGENCE REPORT

SMART INDIA HACKATHON (SIH26167) | ISRO EARTH OBSERVATION MISSION

Mission ID: ddabcb18-9baf-498c-8ae9-48d88cd36d8a	Target Location: Brahmaputra Basin & Kaziranga, Assam
Coordinates: 26.5775° N, 93.1711° E	Reference System: EPSG:32646 (UTM Zone 46N)
Sensor Mode: Sentinel-1 SAR + Sentinel-2 MSI	Generated: 2026-09-18 01:43:10 UTC

1. Natural Language Query & Synthesis

User Query: "Use the optical and SAR images together to identify built-up and water-covered regions."

AI Earth Observation Verdict:

Cross-attention fusion analysis synthesized complementary optical and SAR features. Sentinel-1 SAR penetrates atmospheric cloud and smog cover, detecting structural double-bounce targets (roughness ratio verified), while Sentinel-2 optical data specifies vegetative and spectral land classes. Cross-attention fusion confidence: 89%.

2. Quantitative Remote Sensing Metrics

Category	Analytical Observation
SAR Backscatter	SAR source: Sar Sensor. High VV backscatter: likely urban structures or rough terrain. High VH backscatter: likely forested areas.
Optical Spectrum	Based on multispectral remote sensing analysis, the image depicts predominantly agricultural land (spatial distribution of vegetation indices).
Cross-Attention	8-head cross-attention synthesized dual modalities

3. Observable Agentic Execution Trace (LangGraph Audit Trail)

Node / Step	Agent Action	Latency
N1_QUERY_PARSER	Parsing query: 'Use the optical and SAR images together to identify built-up and water-covered regions...'	0 ms
N1_QUERY_PARSER	intent=CROSS_MODAL_SAR_OPTICAL confidence=0.67 reasoning=Matched 2 keywords for CROSS_MODAL_SAR_OPTICAL	0 ms
